

No amino acid sequences have been changed. The nucleotide sequences at SEQ ID NO: 7 and SEQ ID NO: 8 have been modified. The modifications are presented herewith, together with an executed declaration by all of the inventors. The changes involve one nucleotide at the position following base 1377, in SEQ ID NO: 7, and the one following nucleotide 4633, in SEQ ID NO: 8.

These changes have been accepted in reissue application Serial No. 07/807,043, a reissue of the parent case which issued as U.S. Patent No. 5,342,774.

As is indicated in the declaration and the specification, SEQ ID NOS: 7 and 8 represent specific sequences taken from specific clones. Hence, the sequence of these clones is inherent. The changes made herein thus relate to the type of correction which is permissible. The correction does not introduce new matter.

Entry of the amendment is believed proper, and is requested.

Respectfully submitted,

FULBRIGHT & JAWORSKI
